# Rejuvenate your skin with the Athena MicroExfoliator

## Why ATHENA MICROEXFOLIATOR?

Athena MicroExfoliator is the latest advancement in epidermal exfoliation treatment utilizing the new and revolutionary Geometrical Matrix Point (GMP) Tip. This GMP Tip enables the physician to perform a well regulated, safe, and effective exfoliation of the upper levels of epidermis.

The physician can do this because each GMP Tip consists of more than 600 GMP/cm<sup>2</sup>. This means a fine and consistent exfoliation depth is easily achievable. Combined with a near-infrared LED light for some bactericidal, skin lightening and tightening effect, Athena MicroExfoliator offers the ultimate package in micro-exfoliation treatment.

Another development of great significance in the Athena MicroExfoliator is that the GMP Tip is sterilized and is for single use only. This totally eliminates the risk of cross infection
